

AVINASH V

Senior SDET

SDET with **nearly 5 years** of experience specializing in UI and API test automation, designing scalable automation solutions across **Playwright, Selenium, Tosca, Java, and TypeScript-based frameworks** to improve software quality and release confidence.

Profile Summary

- **Senior QA Engineer** with expertise in building and modernizing scalable UI and API automation frameworks using Selenium (POM) and Playwright (TypeScript), including legacy-to-modern framework migrations.
- **Strong experience in API automation for microservices using Rest Assured** and Postman, ensuring robust service-level regression coverage and efficient test execution.
- **Proficient in leveraging AI tools like GitHub Copilot and LLMs** to accelerate test creation, automate API-based test generation, and improve framework migration efficiency.
- Experienced in **driving shift-left quality engineering practices** with CI/CD-integrated automation, improving early defect detection and reducing defect leakage.
- **Skilled in collaborating with cross-functional teams (Dev, Product, Business)** to define test strategies, refine requirements, and ensure end-to-end coverage aligned with business goals.
- **Proven technical mentor for SDETs**, promoting best practices in automation design, coding standards, and framework development to improve coverage, speed, and release stability.

Organizational Experience

Senior SDET | Zuci Systems | August 2025 – Present

- Modernized API test automation by designing a proof of concept using Tricentis Tosca, established a scalable foundation for API automation and improved framework readiness across services.
- Developed API automation for the Media Management Project using Playwright-TypeScript, while improving regression coverage, execution reliability, and maintainability.
- Done end-to-end migration of API test cases from Tosca to Playwright-TypeScript, ensured a structured transition that improved test manageability.
- Leveraged GitHub Copilot and AI-assisted refactoring to accelerate migration efforts, while reducing overall timeline by ~60%.
- Implemented AI-driven test generation from API documentation, reduced test design effort by ~70% and improved test case creation speed.
- Collaborated with cross-functional teams including development, BA, and product stakeholders to define test strategies, improved requirement clarity and reduced rework.
- Mentored junior SDETs in automation practices, Playwright, and API testing standards, strengthened overall team capability and code quality.
- Drove continuous improvements in automation processes and frameworks, improving efficiency, scalability, and overall test effectiveness.

Education

2021: B.E. (ECE) from College of Engineering Guindy, Anna University with CGPA: 8.47

Certifications

- GitHub Copilot Certification GH-300
- AWS Certified AI Practitioner
- AWS Certified Developer-Associate
- AWS Certified Solution Architect-Associate
- AWS Certified Cloud Practitioner
- ISTQB Certified Tester Foundation Level (CTFL)
- Tricentis Tosca Product Consultant Certification

Core Competencies

UI Test Automation

API Test Automation

Test Automation Framework Design

TypeScript & Java Automation Development

CI/CD Integration for Test Automation

AI-Driven Test Automation

Test Case Design & Optimization

Automation Migration

Agile Testing & Shift-Left Quality Engineering

Automation Tester | April 2024 – July 2025

- Built a scalable UI automation framework for Customer Portal and AIB applications using Selenium, Java, and Page Object Model, improved regression stability and reducing manual testing effort.
- Automated end-to-end test scenarios to improve regression efficiency and support faster release cycles with higher confidence.
- Standardized automation practices across teams by introducing reusable components & coding guidelines, improved maintainability and reduced redundancy.
- Strengthened shift-left testing by integrating automation into sprint cycles and CI workflow, while reducing defect leakage in later stages.
- Conducted knowledge-sharing sessions on Selenium and automation design patterns, while improving team capability and collaboration.
- Actively contributed to sprint planning and retrospectives, improving estimation accuracy and delivery predictability.

Component Tester | September 2021 – March 2024

- Automated UI testing for the CienaBP application using Selenium, Java, and Cucumber, improved execution speed and reduced manual dependency.
- Developed API automation using Rest-Assured and Postman collections, enhanced regression coverage and improved reliability of service validation.
- Designed and executed detailed test cases covering both UI and API layers, ensured strong end-to-end functional coverage.
- Implemented structured testing practices that improved early defect detection and reduced production defect leakage across releases.
- Maintained comprehensive test documentation, execution logs, and defect tracking artifacts, while improving traceability and audit readiness.
- Contributed to continuous process improvements through active participation in agile ceremonies and team retrospectives.

**Personal Projects**

- **TollGate and Vehicle Entry:** ReactJS application with ExpressJS back-end for creating tollgate entries, pricing vehicle types, and tracking vehicle passages, hosted on Netlify and Render.
- **Team Task Management:** ReactJS and AWS-based web app for managing tasks through a serverless back-end using API Gateway, Lambda, and DynamoDB.
- **Event Management:** ReactJS and AWS-based web app for event registration, feedback, and admin management of events, attendees, and feedback through a secure serverless back-end.

Technical Skills

Languages: Typescript, Java

Test Stack: Playwright, Selenium, TOSCA, API Automation with Rest Assured and Postman

Testing Frameworks: Cucumber, Page Object Model

Others: GitHub Copilot, AWS, Basics of MySQL and Linux commands
